

Business Analysis Report

Executive Summary

The company does not show consistent month-over-month growth.	The South region is the weakest-performing region.	The Technology category demonstrates the strongest business performance.	Yes.
The Consumer segment contributes the highest revenue.			

This report analyzes Superstore sales performance using SQL, Excel, and Power BI. The analysis focuses on sales trends, regional performance, category profitability, customer segments, and discount impact. Overall, the company demonstrates healthy sales performance with strong contributions from the **Technology** category and the **Consumer** segment. However, regional performance is uneven, and opportunities exist to improve profitability through better discount management and targeted regional strategies.

1. Is the company growing month-over-month?

Monthly sales fluctuate throughout the year with periods of both growth and decline. For example:

February sales declined by 37.05% compared to January. March recorded a strong recovery with 243.10% growth. April declined by 32.80%. Several later months also experienced alternating increases and decreases.

Although monthly performance is volatile, the overall sales trend shows improvement toward the later months of the period, indicating positive long-term business growth rather than steady month-to-month growth.

1. Which region is underperforming?

Region — Total Sales: West \$725,457.82 | East \$678,781.24 | Central \$501,239.89 | **South \$391,721.91**

The **South** region contributes the lowest sales among all regions, suggesting lower customer demand or weaker market penetration. This region should be prioritized for sales improvement initiatives.

1. Which category has the highest growth?

Category—Profit: **Technology \$145,454.95** | Office Supplies \$122,490.80 | Furniture \$18,451.27

Technology consistently generates the highest profit and also records strong overall sales performance. **Furniture** contributes the least profit and should be reviewed for pricing, discounting, or product strategy.

1. Are discounts reducing profit?

Yes.

The analysis suggests that higher discounts reduce profitability.

While discounts help increase sales volume, excessive discounting lowers profit margins, particularly in lower-margin categories such as **Furniture**.

Management should avoid unnecessary discounts and instead apply targeted promotional strategies that maintain profitability.

1. Which customer segment contributes the most revenue?

Segment — Revenue Contribution: **Consumer 50.56%** | Corporate 30.74% | Home Office 18.70%

More than half of the company's revenue comes from **Consumer** customers, making this the most valuable customer segment. Retaining and expanding this customer base should remain a key business priority.

1. Strategic Recommendations

Based on the analysis, the following actions are recommended:

Increase marketing and promotional efforts in the **South** region to improve sales performance. Continue investing in the **Technology** category, which delivers the highest profit. Reevaluate pricing and discount strategies for furniture to improve profitability. Optimize discount policies by offering targeted discounts rather than blanket reductions. Strengthen customer loyalty programs for the **Consumer** segment, which contributes over half of total revenue. Monitor monthly sales trends regularly to identify seasonal fluctuations and improve sales forecasting.

Conclusion

The company demonstrates strong overall business performance with **total sales of approximately \$2.30 million** and **total profit of approximately \$286,400**. **Technology** products and **Consumer** customers drive the majority of revenue and profit, while the **South** region and **Furniture** category present opportunities for improvement. By focusing on strategic regional expansion, optimized discount management, and continued investment in high-performing products and customer segments, the company can improve profitability and sustain long-term growth.
